10 Write a Python Program to Implement Expectation & Maximization Algorithm

Code:

```
import numpy as np
from sklearn.mixture import GaussianMixture

X = np.array([[1], [2], [2.5], [8], [9], [10]])

model = GaussianMixture(n_components=2, random_state=42)
model.fit(X)

print("Cluster Labels:", model.predict(X))
print("Cluster Means:", model.means_.flatten())
print("Converged:", model.converged_)
```

Output:
